CHIT-CHAT

The Museum Robot

IDEA:

A solution can be built using generative AI technology to overcome the lack of appropriate information on artefacts and the limited interactivity of existing chatbots in the museums. A small robot is made which is moveable and contains a display and it follows the visitor. This could give better exposure about artifacts which will improve the visitor's experience. The visitor can engage with the robot in their navigation pathways and it includes the user interactive mode via its display, which also includes a microphone. The robot is connected to internet in wireless manner, and when a visitor asks any inquiries or information about the artefacts, then the input is picked up by the microphone and sent to a server, where the request is received. The server sends the response to the robot with help of trained model, which will be delivered to the visitor.

AT KALAIGNARKARUNANIDHI INSTITUTE
OF TECHNOLOGY

OVERVIEW:

Majority of the population seems to prefer visiting shopping malls and parks over museums although it is a home to a wealth of cultural treasures. The complete history behind each artefacts have not provided to the visitors with proper guide. AI has the potential in transforming the exposing way of museums with a personalized experience, increasing visitors happiness and engagement.
